ABSTRACT OF THE DISCLOSURE

6 A system and method to organize information on the internet  
7 for rapid and organized retrieval. Registrants of websites can  
8 register URLs by specifying the URL and associated descriptors.  
9 A bot automatically determines URLs and metadata associated with  
10 the registered URL. The URLs and descriptors and/or metadata  
11 form a URL database. Search terms entered by users can be  
12 indexed against a knowledge database using one or more retrieval  
13 algorithms to provide keyword associations. The knowledge  
14 database further includes a knowledge acquisition and retrieval  
15 system and method that include at least one first memory segment,  
16 and a distinct second memory segment, wherein elements of the at  
17 least one first memory segment reciprocally associate to elements  
18 of the second memory segment. Registrants can modify the  
19 knowledge database to incorporate non-traditional associations.  
20 The search term, keyword associations, and URL associations  
21 provide an organized search result that includes subcategories  
22 and cross-categories of information that can be further searched  
23 by the user. URL links can be provided in the search results.
